

OBJECTS OF INVENTION

It is the primary object of invention to invent a novel technique by way of Repetition Coded Compression for highly correlated image data. It is another object of Invention to invent a system for Repetition Coded
5 Compression for higher correlated image data. Another object of invention is to invent a system, which is versatile in application. Further objects of the invention will be clear from the ensuing description.

BRIEF DESCRIPTION OF FIGURES

Figure - 1

10 This figure illustrates the entire image compression system based on Repetition Coded Compression on a hardware implementation.

Figure - 2

This figure is a sample image of the human brain, which is captured by magnetic resonance imaging (MRI), and this sample image would be used to
15 demonstrate the compression achieved by Repetition Coded Compression system. It is a grayscale image.
