

data and the video data suitable for GSM by means of the operating system via a telecommunication connection.

6. Device according to claim 5, wherein the telecommunication is wireless.

5                   7. Method for compressing video data by means of a processor and a memory connected thereto, the memory storing raw video data in a raw file format, an operating system and a first video compression programme, the method comprising:

- a) reading the raw video data from the memory,
- 10       b) compressing the raw video data by means of the operating system and the video compression programme and
- c) storing compressed video data in the memory.

8. Method according to claim 1, wherein a conversion programme is stored in the memory for converting video data  
15 in AVI format to raw video data and the method comprises receiving video data in AVI format and converting the video data in AVI format by means of the operating system and the conversion programme to raw video data.

9. Method according to one of the claims 7 and 8, wherein a second video compression programme is stored in the  
20 memory for compressing video data to GSM video data in a format suitable for GSM and the method comprises the reading out of the compressed video data and further compressing the compressed video data by means of the second video compression programme to compressed video data suitable for GSM.

25                   10. Method according to one of the claims 7-9, wherein the method comprises the displaying of at least one of the video data in AVI format, the raw video data, the compressed video data and the video data suitable for GSM on a monitor by means of the operating system.

30                   11. Method according one of the claims 7-10, wherein the method comprises transmitting at least one of the video data
